Holmatro

PROBLEM STATEMENT

Incidents impacting the ship and evaluate/assess emerging technologies to support its return to service.

TECHNOLOGY SOLUTION

Holmatro hydraulic rescue and recovery tools provide a proven solution for addressing structural damage, equipment failures, and access challenges resulting from shipboard incidents. Our high-force hydraulic tools, battery operate cutters & spreaders, and shoring systems, enable maintenance and recovery teams to safely remove damaged components, realign structures, lift heavy equipment, and gain access to critical areas for repair.

By leveraging Holmatro's portable, high-performance hydraulic & battery technology, shipyards and maintenance organizations can reduce repair timelines, improve worker safety, and minimize operational downtime. The tools support rapid damage assessment and recovery efforts while enabling precision repairs that help accelerate the ship's return to mission-ready status.

BENEFITS

- Rapid response to shipboard damage incidents
- High-force lifting, pulling, and cutting capabilities
- Improved safety for maintenance and recovery personnel
- Reduced repair and restoration timelines
- Enhanced ability to restore critical ship systems and structures
- Supports faster return to operational readiness and service
