# BEAST CODE, LLC
# BEAST CORE

## PROBLEM STATEMENT

The as-maintained condition of equipment, Ships, Submarines, and facilities changes over the life of the asset and is critical in complex system maintenance, overhaul, or refit environments.

Capturing the as-is condition is time consuming and expensive. Beast Code is combining SOTA reality capture techniques with our Beast Core Application Suite to power rapid visualization of the as-built vs as-maintained conditions.

## BENEFITS

Integrating reality capture into our product allows inspectors, engineers and maintainers to:

- Orient within a space using a VPS
- Tag and drop pins on POIs
- Provide visual and spatial context to teams
- Combine the spatial context with the BCAS aggregated digital environment
- Allow repair personnel to navigate directly to the POI with pathing and access tech docs on site.

## TECHNOLOGY SOLUTION

Beast Code is a defense technology company that works with customers to understand complex mission problems, connect disconnected systems and data, build mission-focused software, and sustain those capabilities over time. We connect authoritative systems, technical data, models, documents, schedules, sensors, and other mission information into useful applications.
